

QUALITY ASSURANCE

ASSURANCE PROGRAM

Our facility is CFIA approved to ensure all manufacturing controls and quality control programs are active and enforced. The following is an overview of our Quality Assurance:

FACILITIES & EQUIPMENT

- We operate and maintain our facilities to promote safe feed manufacturing and safe working conditions for employees.
- We require clean truck affidavits for incoming and outgoing loads.
- We maintain and operate our storage, conveying, mixing and processing equipment to prevent contamination of ingredients and finished products.
- We adhere to a strict written sanitation (housekeeping) plan.
- We contract pest control to a HACCP certified third party.
- We validate the performance of our mixing equipment monthly to ensure product uniformity. Mixer C.V. is less than 5%.

INGREDIENTS & PRODUCTS

- We purchase and receive incoming ingredients according to our standard ingredient specifications.
- We routinely test ingredients for mycotoxins and other anti-nutritional factors.
- We do not use prohibited materials (such as animal proteins) or medications.
- We formulate our products to meet guaranteed specifications, and maintain production batch sheets for traceability and audit.
- We complete Foss NIR testing during batch manufacture and on each outgoing load. Samples are maintained for 90 days.
- We review master formulas for all products, and analyze and retain batch mixes on a weekly basis.
- We review our CFIA approved labels every six months.
- We have a health and safety recall program in place.

PROGRAMS

- We provide our employees with internal and external training programs, including operations, feed safety, food safety, personal safety, maintenance and leadership.

"Our goal is to provide our customers with a product that offers exceptional quality and consistency. We feed our own animals the same products we provide to you."

- Tim Wiens, President
